CyberLock's Dynamic Tags Software Enhancement Module Wins 2020 New Product of the Year

Corvallis, Oregon – September 2020

In 2018 CyberLock released its most innovative software to date with CyberAudit Web 9.0. The innovation didn't end with the launch of 9.0. CyberLock has continued adding to this release by developing a variety of software capabilities, many of which were spurred by customer requests. One such capability, introduced in CAW 9.1 is the Dynamic Tags Software Enhancement Module (SEM).

CyberLock is excited to announce that the Dynamic Tags SEM has been awarded the Security Today New Product of the Year in the Access Control Software/Controllers category. Dynamic Tags enable granting access to CyberLocks based upon the values of user-defined fields in People, Lock, People tag, and Lock tag records. Unlike the traditional static tags, locks and people are automatically added to and removed from Dynamic Tags based upon whether their user-defined field values match the criteria of the tag. Dynamic Tags can automatically grant or revoke access when the attributes of a person or lock change, improving safety and accountability.

The 12th annual Security Today New Product of the Year Award submissions were considered by a panel of independent judges and they honor outstanding product development achievements in the security industry.
