CyberLock®

Key Centric Access Control

SCHOOL SECURITY

Protecting School Facility Assets

Schools are the heart of any community and protecting students, staff, and assets is the highest priority. Schools face a variety of security challenges, with many locking points requiring a large inventory of keys. Schools need an access control solution that secures all access points and minimizes the risks associated with duplicate, lost, or stolen keys.

Secure

CyberLock cylinders can be programmed to deny access in the case of a lost or stolen key. An expiration date can be assigned to a key to deny access until updated in the CyberAudit-Web (CAW) software.

Attack Resistant

Unlike mechanical locks, CyberLock cylinders have a unique, sealed design that negates standard lock picking techniques.
Controlled Access

With numerous students, staff, and visitors, controlled access is crucial to preventing unauthorized entry. CyberLock supports personalized access permissions for each user in the system. This enables immediate and precise control over who has access to entry points and at what time.

What Can You Do with the Power of CyberLock?

Roseville Joint Unified School District experienced security difficulties with regularly lost or stolen keys and vandalism of property. With many keys in circulation, the schools were not able to monitor who had access to their buildings. They required an access control system that records who accessed specific locks and at what time, emphasizing student and staff accountability.

Roseville Joint Unified School District currently has 1,400 CyberLocks and over 1,000 keys in use.

CyberLock keys can be programmed with an expiration date in the event a key is lost or stolen.

CyberLock smart keys and smart locks helped Roseville Joint Unified School District decrease vandalism and theft, while also strengthening accountability for students and staff.

System administrators have the ability to program keys to open locks only during school hours.

CyberLock smart locks and keys record every access attempt, successful or not, emphasizing the schools' focus on accountability.

Each CyberLock key has a unique access code, meaning it cannot be duplicated.

How Does CyberLock Work For You?

Locks

Ensuring school facilities are secure is critical to protecting students, staff, and school assets. The CyberLock cylinder is a high security electronic lock designed to track and control access throughout facilities. CyberLock cylinders can be installed in minutes without power or network cables*, making them the ideal solution for securing remote and mobile assets.

Communicators

Communicators provide the interface between CyberLock hardware and CyberAudit-Web management software. Key information is uploaded into the software and new schedules and permissions are downloaded into the keys through a communicator.

Keys

Programmed with access permissions for each user, the CyberKey serves as gatekeeper for the CyberLock system by approving or denying entry. The CyberKey provides power to energize CyberLock cylinders. Additionally, with detailed access reports and customized schedules that can be updated in the field, CyberKey smart keys offer administrators unparalleled control.

Software

CyberAudit-Web manages CyberLock systems of all sizes. The software allows users to assign keys, set key expiration dates, add new cylinders, monitor staff and contractors, create access schedules, and generate audit trails and custom reports.

* Flex Integration Option: The CyberLock Flex System is a modular integrated security solution that combines the benefits of a hardwired security solution with CyberLock's key-centric access control solution, all managed under one unified software platform.

CyberLock, Inc. is the leading supplier of key-centric access control systems. It is part of the Videx family of companies with roots dating back to 2000 when the first CyberLock branded locks and smart keys were introduced to the market.

Videx, Inc. has been designing and manufacturing innovative electronics since the company was founded in Corvallis, Oregon in 1979. Early products included display enhancement modules for Apple computers. In 1985, Videx entered the data collection industry with its first portable bar code scanner. Over the years, additional data collectors have been introduced, utilizing touch memory button and RFID tag technologies.

In 2013, CyberLock, Inc. was spun off as an independent company but maintains strong ties to Videx. The two companies continue to collaborate on future innovations.
