The CyberKey Blue 2 is an electronic key used to operate CyberLock cylinders. It has memory that contains encrypted access codes, a list of locks it may access, schedules of authorized dates and times it may access locks, and a begin-end date range during which the key will operate. The battery from a CyberKey energizes the electronics within a CyberLock cylinder.

The dual-mode Bluetooth technology extends battery life and allows users to update access permissions on the go using an Android or iOS app and smartphone.
