CyberLock®

Key Centric Access Control

PUBLIC SAFETY
SECURITY

Protecting Public Safety Assets

Public safety agencies face a variety of security challenges due to the lack of power supplied in emergency vehicles and narcotic safes. An access control system that records who accessed entry points and at what time is a necessary security measure to meet the needs of the public safety sector.

Secure

CyberLock cylinders can be programmed to deny access in the case of a lost or stolen key. An expiration date can be assigned to a key to deny access until updated in the CyberAudit-Web software.

Attack Resistant

Unlike mechanical locks, CyberLock cylinders have a unique, sealed design that protects against vandalism and standard lock picking techniques.
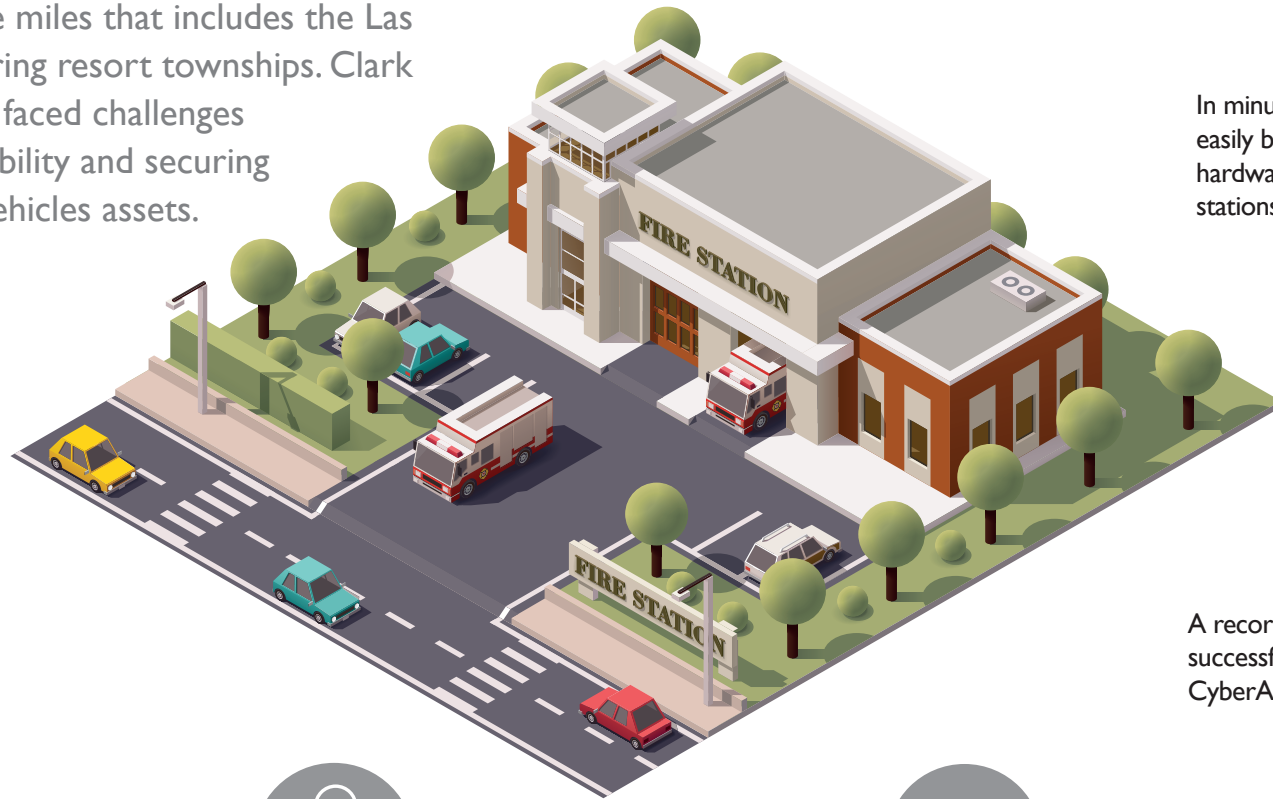

Controlled Access

With job duties requiring access to emergency vehicles and narcotic safes, employees need to be held accountable with controlled access to prevent unauthorized entry. CyberLock keys are programmed with personalized permissions for each user, enabling immediate and precise control over who has access to entry points and at what time.

What Can You Do with the Power of CyberLock?

Clark County Fire Department is the largest dual fire department and medical response system in the state of Nevada, providing emergency services throughout 7,910 square miles that includes the Las Vegas Strip and neighboring resort townships. Clark County fire department faced challenges with employee accountability and securing ambulance and rescue vehicles assets.

In minutes, CyberLock cylinders can easily be retrofitted into existing hardware in rescue vehicles or fire stations.

A record of every access attempt, successful or not, can be viewed in the CyberAudit-Web software.

Since May 2008, Clark County Fire Department has installed CyberLocks on narcotic safes in 25 fire stations and 46 rescue vehicles.

Clark County Fire Department management can program personalized access permissions for employees to carry out their job duties.

The unique and traceable CyberKey smart key is designed to prevent unauthorized duplication of the key ID code.

How Does CyberLock Work For You?

Locks

Protecting the assets of public safety departments is necessary to keep citizens safe in emergency situations. The CyberLock cylinder is a high security electronic lock designed to track and control access throughout facilities. CyberLock cylinders can be installed in minutes without power or network cables*, making them the ideal solution for securing remote and mobile assets.

Keys

Programmed with access permissions for each user, the CyberKey serves as gatekeeper for the CyberLock system by approving or denying entry. The CyberKey provides power to energize CyberLock cylinders. Additionally, with detailed access reports and customized schedules that can be updated in the field, CyberKey smart keys offer administrators unparalleled control.

Communicators

Communicators provide the interface between CyberLock hardware and CyberAudit-Web management software. Key information is uploaded into the software and new schedules and permissions are downloaded into the keys through a communicator.

Software

CyberAudit-Web manages CyberLock systems of all sizes. The software allows users to assign keys, set key expiration dates, add new cylinders, monitor staff and contractors, create access schedules, and generate audit trails and custom reports.

* Flex Integration Option: The CyberLock Flex System is a modular integrated security solution that combines the benefits of a hardwired security solution with CyberLock's key-centric access control solution, all managed under one unified software platform.

CyberLock, Inc. is the leading supplier of key-centric access control systems. It is part of the Videx family of companies with roots dating back to 2000 when the first CyberLock branded locks and smart keys were introduced to the market.

Videx, Inc. has been designing and manufacturing innovative electronics since the company was founded in Corvallis, Oregon in 1979. Early products included display enhancement modules for Apple computers. In 1985, Videx entered the data collection industry with its first portable bar code scanner. Over the years, additional data collectors have been introduced, utilizing touch memory button and RFID tag technologies.

In 2013, CyberLock, Inc. was spun off as an independent company but maintains strong ties to Videx. The two companies continue to collaborate on future innovations.
